1. Introduction

This document is Costa Rica's State Air Navigation Plan (ANP) describing the plan and status of aviation technology implementation. The background of the State ANP and the environment of our air navigation system are presented along with the method and process to evaluate and monitor aviation technology implementation.

1.1 Background

The ICAO Global Air Navigation Plan (Doc 9750, GANP) provides ICAO's vision to achieve sustainable growth of the global civil aviation system. It also presents all States with a comprehensive planning tool supporting a harmonized global air navigation system. The GANP is an overarching framework that includes key civil aviation policy principles to assist ICAO Regions and States with the preparation of their Regional and State Air Navigation Plans (ANPs).

Planning and Implementation Regional Groups (PIRGs) are expected to develop the regional ANPs reflecting the regional requirements. GANP obligates States to map their individual or regional programmes against the harmonized GANP, but provides them with far greater certainty of investment. GANP requires active collaboration among States through the PIRGs in order to coordinate initiatives within applicable regional ANPs.

The GANP introduces the Aviation System Block Upgrades (ASBU) methodology. The ASBU methodology and its description of future aviation capabilities define programmatic and flexible global systems engineering approaches allowing all States to advance their air navigation capacities based on their specific operational requirements.

To this extent, the North American, Central American and Caribbean (NACC) Regional Office (RO), has published the NAM/CAR Regional Performance-Based Air Navigation Implementation Plan (RPBANIP, v3.1 in April 2014) aligning the activities and strategies with the ICAO ASBU methodology.

This document is the ANP for Costa Rica aligning activities and strategies to the GANP and RPBANIP. The information contained in the Costa Rica ANP is related mainly to:

- Planning: objectives set, priorities and targets planned at the state level
- Implementation monitoring and reporting: monitoring the progress of implementation towards targets planned. This information should be used for reporting purposes (i.e.: global and regional air navigation reports and performance dashboards); and/or
- Guidance: providing state guidance material for the implementation of specific system/procedures in a harmonized manner.

The Costa Rica ANP would be used as a tool for planning, monitoring, and reporting the status of implementation of the aviation capabilities.

1.2 Environment

The environments of Air Navigation of Costa Rica, such as authority, airspace and airports, and air traffic are described in this section.

1.2.1 Dirección General de Aviación Civil

The Dirección General de Aviación Civil (DGAC) was established by the Ley General de Aviación Civil in 1973 and updated in 2013. Its mission is to plan, regulate and provide civil aviation services in Costa Rica to guarantee and promote a high quality and safe aeronautical activity centered in customer satisfaction and at the service of the best interest of society, that is efficient, ordered and respectful of the environment, defined as the provision of coordinated and integrated systems of airports and seaports.

The Dirección General de Aviación Civil is responsible for managing local aerodromes and providing air navigations services. It is tasked to provide the framework that permits the development of aviation in Costa Rica. The organization is organized as shown in Figure 1.2.1. Its operation is performed by a highly motivated work force contributing to the sustainable, social and economic development of Costa Rica.

1.2.2 Airspace

Costa Rica is located within the Central American Flight Information Region (FIR) that is managed by Dirección General de Aviación Civil in the lower airspace and by COCESNA in the Upper Air Space. The Costa Rican Air Space is a Class C airspace regarding ICAO airspace classification. Refer to Figure 1.2.2

Figure 1.2.2 1 Central American FIR and Costa Rica

1.2.3 Aerodromes

The Costa Rican Air Navigation Plan takes into consideration its two main international airports, Aeropuerto Internacional Juan Santamaría (MROC) in Alajuela and Aeropuerto International Daniel Oduber Quirós (MRLB) in Guanacaste. These airports are of strategic value for the socio - economic development of the country since they are the port of entry for most of the tourists that visit Costa Rica, a key component of the Gross Domestic Product (GDP). These two aerodromes are listed in the ICAO's regional ANP titled, "Caribbean and South American Air Navigation Plan, Volume I (dated October 2015), Table AOP I-1, International Aerodromes Required in the CAR/SAM Regions". The MROC has the capacity of 30 to 31 air traffic movements per hour. The MRLB had in 2017 a daily average of 57 daily operations, the capacity of the airport has not been declared yet.

 Table 1 Runway Information on Aeropuerto Internacional Juan Santamaría (MROC)

	Runway 07	Runway 25
Length x Width	3011m x 45 m	3011 m x 45 m
Surface Type	Asphalt	Asphalt
TDZ-Elev	903 m	923 m
Lighting	Edge, ALS and ABN	Edge, ALS and ABN
Displace Threshold	0 m	494 m

 Table 2 Runway Information on Aeropuerto Internacional Daniel Oduber Quirós (MRLB)

	Runway 07	Runway 25
Length x Width	2750 m x 45 m	2750 m x 45 m
Surface Type	Asphalt	Asphalt
TDZ-Elev	76 m	82 m
Lighting	Edge and ABN	Edge and ABN
Displace Threshold	NIL	NIL

1.2.4 Traffic Forecast

Number of typical daily operation at Aeropuerto International Juan Santamaría and Aeropuerto Internacional Daniel Oduber Quirós (MRLB) are 233 and 57 average daily operations respectively. The RPBANIP forecasted that average annual growth of air traffic in the Caribbean region would increase 5.9% during 2011-2031. The Dirección General de Aviación Civil believes that this overall Caribbean regional forecast of annual increase of 5.9% is a little too optimistic for Dirección General de Aviación Civil and more moderate number of 5.0% annual increase might represent a more realistic anticipation. Estimated daily operations at MROC and MRLB are shown in Tables 1.2.4a and 1.2.4b applying the increase forecasts to each year from 2017 to 2031.

Year	MROC	MRLB
2018	94.546	22.092
2019	99.273	23.197
2020	104.237	24.356
2021	109.449	25.574
2022	114.921	26.853
2023	120.667	28.196
2024	126.701	29.605
2025	133.036	31.086
2026	139.688	32.640
2027	146.672	34.272
2028	154.005	35.986
2029	161.706	37.785
2030	169.791	39.674
2031	178.281	41.658
2032	187.195	43.741

Table 3 Costa Rica Operations Forecast 2018 - 2032

1.3 Planning Methodology

Guided by the GANP and RPBANIP, the state planning process starts by identifying the state responsible ATM areas, major traffic flows and international aerodromes. An analysis of this data leads to the identification of opportunities for performance improvement. Available technologies and ASBU Elements are evaluated to identify which Elements best provide the needed operational improvements. Depending on the complexity of the selected technology or Elements, additional planning steps may need to be undertaken including financing and training needs. Finally, state plans would be developed for the deployment of improvements and supporting requirements. This is an iterative planning process which may require repeating several steps until a final plan with specific regional targets is in place. This planning methodology requires full involvement of States, service providers, airspace users and other stakeholders, thus ensuring commitment by all for implementation.

Considering that some of the ASBU Modules contained in the GANP are specialized packages of implementable capabilities, called Elements that may be applied where specific operational requirements

or corresponding benefits exist, States will decide how each ASBU Element would fit into national and regional plans.

In establishing and updating the implementation priorities detailed in the Costa RicaANP, due consideration should be given to the safety priorities set out in the Global Aviation Safety Plan (GASP) and the NAM/CAR regional safety strategy. Costa Ricawould establish its own air navigation objectives, priorities and targets to meet its individual needs and circumstances in line with the global and regional air navigation objectives, priorities, and targets.

1.4 Air Navigation Planning Process

The air navigation planning process prescribes evaluation, implementation, reviewing, reporting, and monitoring activities. It is recommended to conduct the process on a cyclical, annual basis. An Air Navigation Reporting Form (ANRF) is a tool to monitor and report the implementation status of capabilities. The Costa Rica ANRF is a customized tool for the application of setting planning targets, monitoring implementation, and identifying challenges, measuring implementation/performance and reporting. The ANRF reflects selected key performance areas as defined in the Manual on Global Performance of the Air Navigation System (ICAO Doc 9883).

Many of the future capabilities are described in terms of ASBU Elements. Some capabilities are specific to the need of the Caribbean Region and/or the State needs. These specific needs are described as Regional Aviation System Improvements (RASI) and State Aviation System Improvements (SASI). Both Analysis and Work Flow and ANRF are useful to manage the implementation status of ASBU, RASI, and SASI capabilities.

1.4.1 Analysis and Work Flow Process

Figure 1.4.1 depicts the workflow for analyzing and implementing ASBU Elements. This flow process should be applied to each of the ASBU Elements. If the Element is applicable to an airport, each airport needs to be evaluated through this flow process. This same flow process is applicable to RASI and SASI.

The significance of each step in the workflow as it pertains to regional planning is as follows:

- Analysis Not Started The requirement to implement this ASBU Element has not yet been assessed
- Analysis In Progress A Need Analysis as to whether or not this ASBU Element is required, is in progress
- N/A The ASBU Element is not required
- **Need** The Need Analysis concluded that the ASBU Element is required, but planning for the implementation has not yet begun
- **Planning** Implementation of this ASBU Element is planned, but not yet started
- **Developing** Implementation of this ASBU Element is in the development phase, but not yet operational
- **Partially Implemented** Implementation of this ASBU Element is partially completed and/or operational but all planned implementations are not yet complete
- **Implemented** Implementation of this ASBU Element has been completed and/or is fully operational everywhere the need was identified

Figure 1.4 1 Analysis and Work Flow

The Need Analysis of ASBU Elements will identify which ASBU Elements are required. In this context, "required" means that the benefits estimated from the implementation would justify the associated implementation costs, or, the potential safety benefits are deemed to justify the implementation costs. The implementation status of ASBU Elements which are not required should be indicated as "N/A", meaning "not applicable".

The analysis and implementation status determined in accordance with the above is reflected in the applicable ANRFs and in the ASBU Implementation Status Tables.

1.4.2 Monitoring and Reporting Results

Monitoring and reporting results will be analyzed by the Regions, States and the ICAO Secretariat to steer the air navigation improvements, take corrective actions and review the allocated objectives, priorities and targets if needed. The results will also be used by ICAO and aviation partner stakeholders to develop the annual Global Air Navigation Report. The report results will provide an opportunity for the international civil aviation community to compare progress across different ICAO regions in the establishment of air navigation infrastructure and performance-based procedures. The reports will also provide the ICAO Council with detailed annual results on the basis of which tactical adjustments will be made to the performance framework work programme, as well as triennial policy adjustments. The information provided in the Costa Rica ANRFs should be periodically reviewed and updated if subsequent analysis results in a change to the applicability of any ASBU Elements, whether or not they were selected. The explanation of ANRF is provided in Appendix A. The customized Costa Rica ASBU Air Navigation Reporting Form Template is provided in Appendix B. The Costa Rica RASI and SASI Air Navigation Reporting Form Templates are provided in Appendix C.

1.5 Problem Identification

To provide and promote safe and efficient aviation services to the customers, it is important to resolve ongoing challenges that hindering the mission. It is also important to anticipate and address the potential problems in the future.

1.5.1 Existing Problems

The demands for MROC and MRLB are only expected to increase in the future.). Although the Dirección General de Aviación Civil developed and implemented Standard Instrument Departure procedures (SIDs) with the goal to increase the safety, efficiency and management of airspace capacity, the current infrastructure at both airports, does not adequately meet peak capacity demand. The solution requires a huge investment in airport infrastructure. The growth in traffic operations has not been paired with a growth in investment in airport infrastructure. Airport terminal development, runway and turning bay reconstruction and rehabilitation, total drainage redevelopment, new control towers and technical blocks, and continuous modernization of communication, navigation, and surveillance are a must to reap the most benefits from the Performance Based Navigation procedures.

In addition, airport operations need to be improved by introducing capabilities such as Airport Collaborative Decision Making (ACDM). To support airport operations, having accurate and timely weather and aeronautical information is essential. Information such as wind shear warnings/alerts will increase safety of operations. Securing quality data should also be accomplished by introducing the Quality Management System (QMS) to weather data.

A fundamental component which is critical concern, is the availability of human resource to meet the wide-ranging needs of airport operations. The provision of relevant training for that human resource is paramount.

1.5.2 Future Problems

Anticipating heavier demand at the MROC and MRLB airports, the human resource issues, if not addressed in tandem with the infrastructure and procedure development, could result in deficient service provision and delivery. Human resource acquisition and development must coincide with the infrastructure and procedure development.

The human resource issue is expected to get worse since the new hire rate is lower than the pension rate, meaning that at the current pace of hiring in the next decade we will have less air traffic controllers than we have today.

A major problem for the development of aviation in Costa Rica and it's air navigation services is that the main current airport is not suited to attend the expected future demand. A new airport must be build in the next decades with the abilities to handle more operations in quantity and type.

2. Costa Rican Aviation System Block Upgrade (ASBU) Implementation Status

The status of ASBU implementation is provided in this section. Though there are Block 0 to Block 4 (B0, B1, B2, and B3), only B0 capacities are ready to be implemented with supporting documents such as standards, procedures, specifications, and training materials. ICAO will provide supporting documents for B1 in 2019, B2 in 2025, and B3 in 2031.

2.1 ASBU Block 0 Implementation Metrics, Targets, and Status

ASBU B0 Implementation Targets and Status are presented in this section. Dirección General de Aviación Civil considers two airports, Aeropuerto Internacional Juan Santamaría (MROC) and Aeropuerto Internacional Daniel Oduber Quirós (MRLB) for airport oriented Elements.

2.1.1 ASBU B0 Implementation Metrics and Targets

Table 2.1 1 provides the ASBU B0 Implementation Metrics, Targets, and Progress for each B0 Element.

Block 0 Modules	Elements	Metrics	Targets	Status & Remarks	
	Performance Improvement Area 1: Airport Operations				
ACDM	1. Interconnection between aircraft operator & ANSP systems to share surface operations information	 Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i> 	 B0-ACDM-1 Target 1: Assessed in August 2018 a. Yes b. 1 (MROC) B0-ACDM-1 Target 2: Implement by Dec 2019 c. None 	Status – Planning Only MROC needs this capability.	
	2. Interconnection between aircraft operator & airport operator systems to share surface operations information	 Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i> 	 B0-ACDM-2 Target 1: Assessed in August 2018 a. Yes b. 1 (MROC) B0-ACDM-1 Target 2: Implement by Dec 2019 c. None 	Status – Need Only MROC needs this capability.	
	3. Interconnection between airport operator & ANSP systems to share surface operations information	 Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i> 	 B0-ACDM-3 Target 1: Assessed in August 2018 a. Yes b. 1 (MROC) B0-ACDM-3 Target 2: Implement by Dec 2019 c. None 	Status – Planning Only MROC needs this capability.	
	4. Interconnection between airport operator, aircraft operator & ANSP systems to share surface operations information	Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i>	B0-ACDM-4 Target 1: Assessed in August 2018 a. Yes b. 1 (MROC) B0-ACDM-4 Target 2: Implement by Dec 2019 c. None	Status – Need Only MROC needs this capability.	
	5. Collaborative departure queue management	 Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i> 	 B0-ACDM-5 Target 1: Assessed in August 2018 a. Yes b. 1 (MROC) B0-ACDM-5 Target 2: Implement by Dec 2019 c. None 	Status – Need Only MROC needs this capability.	

Block 0 Modules	Elements	Metrics	Targets	Status & Remarks
АРТА	1. PBN approach procedures with vertical guidance to LNAV/VNAV minima	 Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i> 	 B0-APTA-1 Target 1: Assessed in August 2018 a. Yes b. 2 MROC AND MRLB B0-APTA-1 Target 2: Implemented by Dec 2019 c. None 	Status – Developing Both MROC and MRLB need this capability.
	2. PBN approach procedures with vertical guidance to LPV minima	 Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i> 	 B0-APTA-2 Target 1: Assessed in August 2018 a. Yes b. None B0-APTA-2 Target 2: c. N/A 	Status – N/A
	3. PBN Approach Procedures without vertical guidance (LP, LNAV minima; using SBAS)	 Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i> 	 B0-APTA-3. Target 1: Assessed in Aug 2018 a. Yes b. None B0-APTA-3 Target 2: c. N/A 	Status – N/A
	4. GBAS Landing System (GLS) Approach procedures	 Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i> 	B0-APTA-4. Target 1: Assessed in Aug 2018 a. Yes b. None B0-APTA-4. Target 2: c. N/A	Status – N/A
RSEQ	1. AMAN via controlled time of arrival to a reference fix	 Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i> 	B0-RSEQ-1. Target 1: Assessed in Aug 2018 a. Yes b. None B0- RSEQ-1 Target 2: c. N/A	Status – N/A
	2. Departure management	Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i>	B0-RSEQ-2. Target 1: Assessed in Aug 2018 a. Yes b. None B0-RSEQ-2. Target 2: c. N/A	Status – N/A
	3. Departure flow management	Number of aerodromes to be considered: 2 a. Have we assessed the need? Yes or No b. How many aerodromes need this capability? None, 1, or 2 c. How many aerodromes implemented the capability? None, 1, or 2	B0-RSEQ-3. Target 1: Assessed in Aug 2018 a. Yes b. None B0-RSEQ-3. Target 2: c. N/A	Status – N/A
	4. Point merge	 Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i> 	B0-RSEQ-4. Target 1: Assessed in Aug 2018 a. Yes b. None B0-RSEQ-4. Target 2: c. N/A	Status – N/A

Block 0 Modules	Elements	Metrics	Targets	Status & Remarks
SURF	1. A-SMGCS with at least one cooperative surface surveillance system	 Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i> 	B0-SURF-1. Target 1: Assessed in Aug 2018 a. Yes b. None B0-SURF-1. Target 2: c. N/A	Status – N/A
	2. Including ADS-B APT as an element of A-SMGCS	Number of aerodromes to be considered: 2 a. Have we assessed the need? Yes or No b. How many aerodromes need this capability? None, 1, or 2 c. How many aerodromes implemented the capability? None, 1, or 2	B0-SURF-2. Target 1: Assessed in Aug 2018 a. Yes b. None B0-SURF-2. Target 2: c. N/A	Status – N/A
	3. A-SMGCS alerting with flight identification information	 Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None</i>, 1, or 2 c. How many aerodromes implemented the capability? <i>None</i>, 1, or 2 	B0-SURF-3. Target 1: Assessed in Aug 2018 a. Yes b. None B0-SURF-3. Target 2: c. N/A	Status – N/A
	4. EVS for taxi operations	 Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i> 	B0-SURF-4. Target 1: Assessed in Aug 2018 a. Yes b. None B0-SURF-4. Target 2: c. N/A	Status – N/A
	5. Airport vehicles equipped with transponders	 Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None</i>, 1, or 2 c. How many aerodromes implemented the capability? <i>None</i>, 1, or 2 	B0-SURF-5. Target 1: Assessed in Aug 2018 a. Yes b. None B0-SURF-5. Target 2: c. N/A	Status – N/A
VAKE	1. New PANS- ATM wake turbulence categories and separation minima	ICAO has not developed new minima.	N/A	Status – N/A
	2. Dependent diagonal paired approach procedures for parallel runways with centrelines spaced less than 760 meters (2,500 feet) apart	 Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i> 	 B0-WAKE-2. Target 1: Assessed in Aug 2018 a. Yes b. None B0-WAKE-2. Target 2: c. N/A 	Status – N/A
	3. Wake independent departure and arrival procedures for parallel runways with centrelines spaced less than 760 meters (2,500 feet) apart	 Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i> 	 B0-WAKE-3. Target 1: Assessed in Aug 2018 a. Yes b. None B0-WAKE-3. Target 2: c. N/A 	Status – N/A

Block 0 Modules	Elements	Metrics	Targets	Status & Remarks
	4. Wake turbulence mitigation for departures procedures for parallel runways with centrelines spaced less than 760 meters (2,500 feet) apart	 Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i> 	B0-WAKE-4. 	4. Aerodrome warnings	 Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i> 	B0-AMET-4. Target 1: Assessed in Aug 2018 a. Yes b. 2 (MROC , MRLB) B0-AMET-4. Target 2: Implement by Dec 2019 c. 2	Status – Implemented
	5. Wind shear warnings and alerts	 Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i> 	 B0-AMET-5. Target 1: Assessed in Aug 2018 a. Yes b. 2 (MROC , MRLB) B0-AMET-5. Target 2: Implement by Dec 2020 c. 2 	Status – Need The need to acquire equipment to accurately inform pilots and air traffic controllers about windshear has been identified. The purchase of the equipment has not been started yes.
	6. SIGMET	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	B0-AMET-6. Target 1: Assessed in Aug 2018 a. Yes b. Yes B0-AMET-6. Target 2: c. Implemented Jan 2015	Status – Implemented Implemented thorough the Oficina de Vigilancia Meteorológica (OVM) in Honduras.

Block 0 Modules	Elements	Metrics	Targets	Status & Remarks
	7. Other OPMET information (METAR, SPECI and/or TAF)	 Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i> 	B0-AMET-7. Target 1: Assessed in Aug 2018 a. Yes b. 2 B0-AMET-7. Target 2: Implemented in Jan 2000 c. 2	Status – Implemented At both MROC and MRLB Implemented through the Instituto Meteorológico Nacional (IMN) in San José, Costa Rica.
	8. QMS for MET	 a. Have we assessed the need? <i>Yes or No</i> b. Do we need this capability? <i>Yes or No</i> c. Have we implemented the capability? <i>Yes or No</i> 	 B0-AMET-8. Target 1: Assessed in Aug 2018 a. Yes b. Yes B0-AMET-8.Target 2: Implement by Dec 2019 c. No 	Status – Developing In the process of preparing documents and trainings.
DATM	1. Aeronautical Information Exchange Model (AIXM)	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	B0-DATM-1. Target 1: Assessed in Aug 2018 a. yes b. yes B0-DATM-1. Target 2: Implemented by 2016 c. No	Status - Implemented
	2. eAIP	 a. Have we assessed the need? <i>Yes or No</i> b. Do we need this capability? <i>Yes or No</i> c. Have we implemented the capability? <i>Yes or No</i> 	B0-DATM-2. Target 1: Assessed in Aug 2018 a. Yes b. Yes B0-DATM-2. Target 2: Implemented in Jan 2020 c. Yes	Status – Developing
	3. Digital NOTAM	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	B0-DATM-3. Target 1: Assessed by August 2018 a. Yes b. Yes B0-DATM-3. Target 2: Implemented in 2016 c. Yes	Status – Implemented
	4. eTOD	Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i>	B0-DATM-4. Target 1: Assess by August 2018 a. Yes b. 1 B0-DATM-4. Target 2: Implemented by Dec 2021 c. No	Status – Planning
	5. WGS-84	 a. Have we assessed the need? <i>Yes or No</i> b. Do we need this capability? <i>Yes or No</i> c. Have we implemented the capability? <i>Yes or No</i> 	B0-DATM-5. Target 1: Assessed in Aug 2018 a. Yes b. Yes B0-DATM-5. Target 2: Implemented in Jan 1993 c. Yes	Status – Implemented
	6. QMS for AIM	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	 BO-DATM-6. Target 1: Assessed in Aug 2018 a. Yes b. Yes BO-DATM-6. Target 2: Implement by Dec 2016 a. No 	Status – Implemented

Block 0 Modules	Elements	Metrics	Targets	Status & Remarks
FICE	1. AIDC to provide initial flight data to adjacent ATSUs	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	 B0-FICE-1. Target 1: Assessed in Aug 2018 a. Yes b. Yes B0-FICE-1. Target 2: Implemented by Dec 2020 c. No 	Status – Developing AIDC managed by COCESNA regional service provider, with the implementation of the new Radar Control Center, AIDC will be implemented with CENAMER, Nicaragua among other FIR's.
	2. AIDC to update previously coordinated flight data	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	 B0-FICE-2. Target 1: Assessed in Aug 2018 a. Yes b. Yes B0-FICE-2. Target 2: Implemented by Dec 2020 c. No 	Status – Developing AIDC managed by COCESNA regional service provider, with the implementation of the new Radar Control Center, AIDC will be implemented with CENAMER, Nicaragua among other FIR's.
	3. AIDC for control transfer	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	B0-FICE-3. Target 1: Assessed in Aug 2018 a. Yes b. Yes B0-FICE-3. Target 2: Implemented by 2020 c. No	Status – Developing AIDC managed by COCESNA regional service provider, with the implementation of the new Radar Control Center, AIDC will be implemented with CENAMER, Nicaragua among other FIR's.
	4. AIDC to transfer CPDLC logon information to the Next Data Authority	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	 B0-FICE-4. Target 1: Assessed in Aug 2018 a. Yes b. Yes B0-FICE-4. Target 2: Implemented by 2020 c. No 	Status – Developing CPDLC and AIDC are managed by COCESNA regional service provider, with the implementation of the new Radar Control Center, AIDC will be implemented with CENAMER, Nicaragua among other FIR's.

ACAS	1. ACAS II (TCAS version 7.1)	 a. Have we assessed the need? <i>Yes or No</i> b. Do we need this capability? <i>Yes or No</i> c. Have we implemented the capability? <i>Yes or No</i> 	 B0-ACAS-1. Target 1: Assessed in Aug 2018 a. Yes b. Yes B0-ACAS-1. Target 2: Implement by TBD c. No 	Status – Need
	2. Auto Pilot/Flight Director (AP/FD) TCAS	 a. Have we assessed the need? <i>Yes or No</i> b. Do we need this capability? <i>Yes or No</i> c. Have we implemented the capability? <i>Yes or No</i> 	B0-ACAS-2. Target 1: Assessed in Aug 2018 a. Yes b. Yes B0-ACAS-2. Target 2: Implement by TBD c. N/A	Status – Need

Block 0 Modules	Elements	Metrics	Targets	Status & Remarks		
	3. TCAS Alert Prevention (TCAP)	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	B0-ACAS-3. Target 1: Assessed in Aug 2018 a. Yes b. Yes B0-ACAS-3. Target 2: Implemented by TBD c. No	Status – Need		
ASEP	1. ATSA-AIRB	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	B0-ASEP-1. Target 1: Assessed in Aug 2018 a. Yes b. No B0-ASEP-1. Target 2: c. N/A	Status - N/A		
	2. ATSA-VSA	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	B0-ASEP-2. Target 1: Assessed in Aug 2018 a. Yes b. No B0-ASEP-2. Target 2: c. N/A	Status - N/A		
ASUR	1. ADS-B	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	B0-ASUR-1. Target 1: Assessed in Aug 2018 a. Yes b. Yes B0-ASUR-1. Target 2: Implement by May 2018 c. Yes	Status – Implemented Costa Rica has implemented ADS – B with the new radar system installed in 2018.		
	2. Multilateration (MLAT)	 Number of aerodromes to be considered: 2 a. Have we assessed the need? <i>Yes or No</i> b. How many aerodromes need this capability? <i>None, 1, or 2</i> c. How many aerodromes implemented the capability? <i>None, 1, or 2</i> 	B0-ASUR-2. Target 1 Assessed in Aug 2018: a. Yes b. No B0-ASUR-2. Target 2: c. N/A	Status - N/A		
FRTO	1. CDM incorporated into airspace planning	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	B0-FRTO-1. Target 1: Assessed in Aug 2018 a. Yes b. No B0-FRTO-1. Target 2: c. N/A	Status - N/A		
	2. Flexible Use of Airspace (FUA)	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	B0-FRTO-2. Target 1: Assessed in Aug 2018 a. Yes b. No B0-FRTO-2. Target 2: c. N/A	Status - N/A		
	3. Flexible route systems	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	B0-FRTO-3. Target 1 Assessed in Aug 2018: a. Yes b. No B0-FRTO-3. Target 2: c. N/A	Status - N/A		
	4. CPDLC used to request and receive re-route clearances	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	B0-FRTO-4. Target 1: Assessed in Aug 2018 a. Yes b. No B0-FRTO-4. Target 2: c. N/A	Status - N/A		

Block 0 Modules	Elements	Metrics	Targets	Status & Remarks
NOPS	1. Sharing prediction of traffic load for next day	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	 B0-NOPS-1. Target 1: Assessed in Sep 2017 a. Yes b. Yes B0-NOPS-1. Target 2: Implement by TBD c. No 	Status – Developing The DGAC and COCESNA are working together to develop ATFM solutions. COCESNA has already developed a traffic predictive application.
	2. Proposing alternative routings to avoid or minimize ATFM delays	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	B0-NOPS-2. Target 1: Assessed in Sep 2017 a. Yes b. Yes B0-NOPS-2. Target 2: Implement by TBD c. No	Status – Developing The DGAC and COCESNA are working together to develop ATFM solutions.
OPFL	1. ITP using ADS-B	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	B0-OFTL-1. Target 1: Assessed in Aug 2018 a. Yes b. No B0-OFTL-1. Target 2: c. N/A	Status - N/A
SNET	1. Short Term Conflict Alert (STCA)	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	 B0-SNET-1. Target 1: Assessed in Aug 2018 a. Yes b. Yes B0-SNET-1. Target 2: Implemented by April 2018 c. Yes 	Status – Implemented Implemented with the upgrade of the Radar Control Center.
	2. Area Proximity Warning (APW)	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	B0-SNET-2. Target 1: Assessed in Aug 2018 a. Yes b. Yes B0-SNET-2. Target 2: Implemented by April 2018 c. Yes	Status – Implemented Implemented with the upgrade of the Radar Control Center.
	3. Minimum Safe Altitude Warning (MSAW)	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	BO-SNET-3. Target 1: Assessed in Aug 2018 a. Yes b. Yes BO-SNET-3. Target 2: Implemented by April 2018 c. Yes	Status – Implemented Implemented with the upgrade of the Radar Control Center.
	4. Medium Term Conflict Alert (MTCA)	 a. Have we assessed the need? Yes or No b. Do we need this capability? Yes or No c. Have we implemented the capability? Yes or No 	 B0-SNET-4. Target 1: Assessed in Aug 2018 a. Yes b. Yes B0-SNET-4. Target 2: Implemented by April 2018 c. Yes 	Status – Implemented Implemented with the upgrade of the Radar Control Center.

2.2 ASBU Block 1 Implementation Targets and Status

This section will be written after 2019. Appendix E is reserved for ASBU B1 ANRFs.

2.3 ASBU Block 2 Implementation Targets and Status

This section will be written after 2025. Appendix F is reserved for ASBU B2 ANRFs.

2.4 ASBU Block 3 Implementation Targets and Status

This section will be written after 2031. Appendix G is reserved for ASBU B3 ANRFs.

3. ICAO NACC Regional Aviation System Improvements (RASI) Status

The RPBANIP is aligned with GANP and provides guidance to States in the NACC region. The ICAO NACC RO also provides guidance to implement certain capabilities outside the ASBU scope, yet regionally important improvements. Currently 4 aerodrome associated NACC region specific improvements are identified and shown below. RASI ANRF for ICAO NACC Regional Initiatives is prepared and provided in Appendix H.

- Aerodrome certification Status: Developing (at both MROCand MRLB)
- Heliport operational approval Status: Implemented
- Visual aids for navigation Status: Implemented
- Aerodrome Bird/Wildlife Organization and Control Programme Status: Developing

4. Costa Rica State Aviation System Improvements (SASI) Status

Beyond ASBU's

Costa Rica Aviation System Improvements (SASI) are broken into three categories; (1) Equipment upgrades; (2) Procedure upgrades; and (3) Infrastructure upgrades. The details of upgrades were recorded using SASI ANRFs and provided in Appendix I.

4.1 Equipment Upgrades

Projects to the update the radio communications network are in development. ILS equipment replacement

4.2 Procedure Upgrades

A project to redesign the Costa Rican airspace is under analysis.

4.3 Infrastructure Upgrades

There are currently no infrastructure upgrades identified.

5. Costa Rica State ANP Next Review Schedule

The next review and revision of this document is scheduled in September 2019.

Appendix A: ANRF Explained

An ASBU ANRF should be completed for each applicable ASBU Module as follows:

PIA	The Performance Improvement Area (1, 2, 3 or 4) for the ASBU Module, as per the <i>NAM ASBU Handbook</i> .					
Block - Module	The Module Designation for the ASBU Module, as per the NAM ASBU Handbook.					
Date	The date when the form was completed or updated.					
Module Description	The Summary Description for the ASBU Module, as per the NAM ASB Handbook.					
Element	The descriptive text for each Element, as per the <i>NAM ASBU Handbook</i> . It is not necessary to include the Defined, Derived from or Identified By information. Insert additional rows, if necessary, to accommodate all of the Elements listed for the ASBU Module.					
Date Planned or Impl	emented The month and year when the Element was fully implemented or the year when it is planned for the Element to be fully implemented by all applicable States or at all applicable aerodromes. This field should be left blank if the Status for the Element is "Analysis Not Started" or "Not Applicable" for all States or aerodromes in the Region.					
Status	The Need Analysis or Implementation status for the Element, in accordance with Table NAM ASBU III-1, III-2, III-3 or III-4. Indicate the status as follows:					
	Not Started: if the Need Analysis has not been started for any of the States or aerodromes					
	In Progress: if at least one Need Analysis has been started but none have yet been completed					
	Need: if at least on Need Analysis has determined a requirement for the Element, but no implementation planning has yet been initiated					
	Not Applicable: 1) if all of the Need Analyses completed to date have concluded the Element is not required, or 2) if the Element is not an aerodrome-related improvement and the Region has not adopted the improvement for region-wide implementation.					
	Planning: if at least one implementation is in the Planning phase and no implementations have yet been completed.					
	Developing: if at least one implementation is in the Developing phase but no implementations have yet been completed.					
	Partially Implemented: if at least one, but not all, implementations have been completed.					
	Implemented: if all of Needed implementations have been completed.					
Status Details	Further information to support or explain the reported status. The reason(s) an Element was found to be "Not Applicable" for all the aerodromes (or States) in the Region. The reason(s) why the Need Analysis has not been completed for all or some of the aerodromes (or States) in the Region. Information on where implementation has or has not been completed (as appropriate) if the reported status is "Partially Implemented".					

Achieved Benefits Describe the achieved benefits for the entire Module or particular Elements. The benefits can be quantitative or qualitative. The benefits should be described for the following 5 of the 11 Key Performance Areas (KPAs) defined the *Manual on Global Performance of the Air Navigation System* (Doc 9883):

Access & Equity: Improving the operating environment so as to ensure all airspace users have the right of access to ATM resources needed to meet their specific operational requirements; and ensuring that the shared use of the airspace for different airspace users can be achieved safely. Providing equity for all airspace users that have access to a given airspace or service. Generally, the first aircraft ready to use the ATM resources will receive priority, except where significant overall safety or system operational efficiency would accrue or national defence considerations or interests dictate by providing priority on a different basis.

Capacity: Improving the ability to meet airspace user demand at peak times and locations while minimizing restrictions on traffic flow. Responding to future growth by increasing capacity, efficiency, flexibility, and predictability while ensuring that there are no adverse impacts to safety and giving due consideration to the environment. Increasing resiliency to service disruption and minimising resulting temporary loss of capacity.

Efficiency: Improving the operational and economic cost effectiveness of gateto-gate flight operations from the airspace users' perspective. Increasing the ability for airspace users to depart and arrive at the times they select and fly the trajectory they determine to be optimum in all phases of flight.

Environment: Contributing to the protection of the environment by minimizing or reducing noise, gaseous emissions, and other negative environmental effects in the implementation and operation of the air navigation system.

Safety: Reducing the likelihood or severity of operational safety risks associated with the provision or use of air navigation services.

Implementation Challenges A description of any circumstances that have been encountered or are foreseen that might prevent or delay implementation. Challenges should be categorized and described under the applicable subject area.

Any further information as deemed appropriate.

Ground system Implementation None

Avionics Implementation

None

Procedures Availability

None

Operational Approvals None

Notes

The ICAO NACC office recommends that the first AIDC should take place with Panama, since they use the ASIA – PAC version and the lessons learned from the implementation can be used to expedite the process with CENAMER and Managua.

<i>Eff</i> Ele						
<i>Eff</i> Ele eff	ement 3. Visual aids for navigation: Annex 14 compliant viciently complete ground movements vironment: No report					

Safety

Element 1 - Aerodrome certification: Certification should be contingent upon the airport complying with applicable ICAO SARPs. Certification and the associated regulatory oversight should increase the effectiveness of SSP and SMS processes to identify and correct safety issues at certified aerodromes.

Element 2. Heliport operational approval: Certification should be contingent upon the heliport complying with applicable ICAO SARPs. Approval and the associated regulatory oversight should increase the effectiveness of SSP and SMS processes to identify and correct safety issues at approved heliports.

Element 3. Visual aids for navigation: Annex 14 compliant visual aids for navigation reduce flight crew confusion and assist in avoiding runway incursions or other ground movement errors.

Element 4. Aerodrome Bird/Wildlife Organization and Control Programme: An effective organization and control programme reduces the potential for aircraft to strike wildlife or ingest wildlife into engines or propellers.

Implementation Challenges

Ground system Implementation: No report: No report

Avionics Implementation: No report

Procedures Availability: No report Operational Approvals: No report

Notes

Element 1: Airport Terminal Development will also address the airport terminal security issues.
