1.0   INTRODUCTION

The first edition of the Advanced Passenger Information Guidelines was published in 1993 and included the data requirements that carriers were required to provide when reporting Advanced Passenger Information (API) to Border Control Agencies.

The Guideline also contained the specifications for the WCO/IATA subset of the UN/EDIFACT PAXLST message that had been designed as multi-modal, multi-functional message.

In October 2002, the WCO and IATA jointly updated the API Guidelines and reached agreement on a revised set of API data requirements.

This finalised set, adopted jointly by the WCO, IATA and ICAO in 2010, and subsequently revised in 2013 includes additional data elements and a new message set (UN/EDIFACT CUSRES) that have been adopted by a number of Border Control Agencies, in response to heightened security concerns within the air travel industry.   This document represents the maximum number of data elements that carriers may be required to provide when reporting Advanced Passenger Information (API) to Border Control Agencies.

Carriers need to be aware that some Border Control Agencies may not require all elements contained within each message set.

The set of requirements have been mapped into the WCO/IATA/ICAO subset of the UN/EDIFACT PAXLST and CUSRES messages and this detailed Message Implementation Guide has been developed by the WCO/IATA/ICAO API Contact Committee.

The purpose of this Guide is to aid border control Agencies and carriers in understanding the UN/EDIFACT PAXLST and CUSRES messages before beginning detailed development and implementation.

This Guide contains the necessary message branching diagrams and describes the function and use of each segment within its relative position within the message sets.

Examples on a segment basis and on a message basis are also included.

2.0   MESSAGE RELATIONSHIPS

The UN/EDIFACT PAXLST message set may be implemented as a standalone batch message for which there is no direct response message, or implemented within a bi-directional, interactive API message exchange process incorporating both UN/EDIFACT PAXLST and CUSRES message sets

The agreed data requirements for the WCO/IATA/ICAO PAXLST message are defined in Section 8 of the Advanced Passenger Information Guidelines and for the purpose of message design are reproduced as follows:

3.0   MESSAGE STRUCTURE FOR THE PAXLST MESSAGE

This message specification is based on the UN/EDIFACT Passenger List (PAXLST) Message and is specific to the air mode. It permits the transfer of passenger and crew member data from an airline to a Border Control Authority or other designated authority in the country of arrival (or departure) of the means of transport.

The basic concept of the PAXLST message is that there is one message for all passengers on the specified flight (or individual interactive PAXLST messages on a passenger-by-passenger basis) and a separate message used to report all crew members on that flight.

3.1   APPLICATION SEGMENTS USED IN THE WCO/IATA/ICAO PAXLST MESSAGE

The segments included in the air mode implementation of PAXLST are:

ATT	Attribute
BGM	Beginning of Message
CNT	Control Total
COM	Communication Contact
DOC	Document/Message Details
DTM	Date/Time/Period
FTX	Free Text
GEI	Processing Information
LOC	Place/Location Identification
MEA	Measurements
NAD	Name and Address
NAT	Nationality
RFF	Reference
TDT	Details of Transport
UNA	Service Segment Advice
UNB	Interchange Header
UNE	Functional Group Trailer
UNG	Functional Group Header
UNH	Message Header
UNT	Message Trailer
UNZ	Interchange Trailer

It should be noted that the UN/EDIFACT PAXLST message includes other segments not included above.

3.2   UNITED NATIONS SERVICE SEGMENTS

The UN Service Segments UNA, UNB and UNZ should be implemented as they are described in ISO 9735 Application Level Syntax Rules - Version 4. The use of the UNG and UNE segment pair is optional within UN/EDIFACT message syntax, based upon bilateral agreement.

Data requirements for these segments are determined on a bilateral basis between individual carriers and respective Border Control Agencies.

4.0 SEGMENT DETAILS FOR USE IN THE PAXLST MESSAGE

This Section provides a detailed table of each segment, in their relative position within the message, that may be required for the air mode PAXLST message.

Each table contains the UN/EDIFACT composite element and data element names, numbers and formats.

The table also contains the PAXLST format and status (Mandatory, Conditional or Not Applicable) of the elements within the segment, the number of repetitions, and the indication of a code set.

The elements that may be used in each segment are indicated by **bolding** the element name.

M or **C** in the Status column indicates a Mandatory or Conditional element.

N/A in the Status column indicates that there is no requirement to populate this field.

Additional comments on the use of the elements are also provided.

Code set values that may be used in each segment are provided in **BOLD** text.
Examples of other values are provided in ***BOLD ITALICISED*** text.

4.1   UNA: SERVICE STRING ADVICE

Function: The Service String Advice (UNA) is Conditional and provides the capability to specify the service characters (delimitation syntax) used within the interchange. The UNA service string advice *must* be used if the service characters differ from the defaults as identified in ISO 9735 EDIFACT Syntax Rules. The UNA is optional if the default characters are used.

When used, the service string advice shall appear immediately before the interchange header segment. The service string advice shall begin with the upper case characters UNA immediately followed by six characters in the order shown below.   The same character shall not be used in more than one position of the UNA.

Default Service Characters

For EDIFACT compliance the data provider to give…

>**DTM+CCC:DDDDDD'**   Record to be ignored; no business information held in this segment

Where
>**CCC** was any valid EDIFACT code value from codelist 2005 and
>**DDDDDD** (or DDDDDDDDDD) is a syntactically correct date of either "YYMMDD" or "YYMMDDHHMM" formats.

Note From EDIFACT Directories from D13B onwards the DTM segment will be conditional and can be eliminated from the Guidelines as such.

5.5   Flight Close-Out PAXLST Message

This sample illustrates a PAXLST message that may be used to report a Flight Close-Out
message that identifies all passengers who boarded the flight identified in the message.
In this example, passengers are identified only by Passenger Recor Locator and Unique
Passenger Reference (RFF qualifiers 'AVF' and 'ABO' respectively). The expectation, in this
example, is that the passenger names (travel documentation, etc.) were collected through
previously transmitted PAXLST API submissions.
