AMHS WORKSHOP

REGIONAL WORKSHOP ON AMHS

AMHS

Detailed specifications

(Dakar, 28-29 May 2013)

Outline

- High level requirements
- ATS Message Service
- Validation performed
- Implementation plans
- Transition from AFTN or CIDIN to AMHS

AMHS: High level requirements

- ✈ Provide a messaging service over the ATN
- ✈ Deliver a level of service at least equivalent to that of the AFTN
- ✈ Allow transition from AFTN to ATN
- ✈ Allow transition from CIDIN to ATN

AMHS: AFTN Functionalities

- ✈ Store-and-forward messaging service ensuring no loss of messages
- ✈ 3 Transmission Priorities
- ✈ 5 Priority Indicators
- ✈ Multiple addressee messages
- ✈ Collective addresses
- ✈ Possibility to convey optional heading information

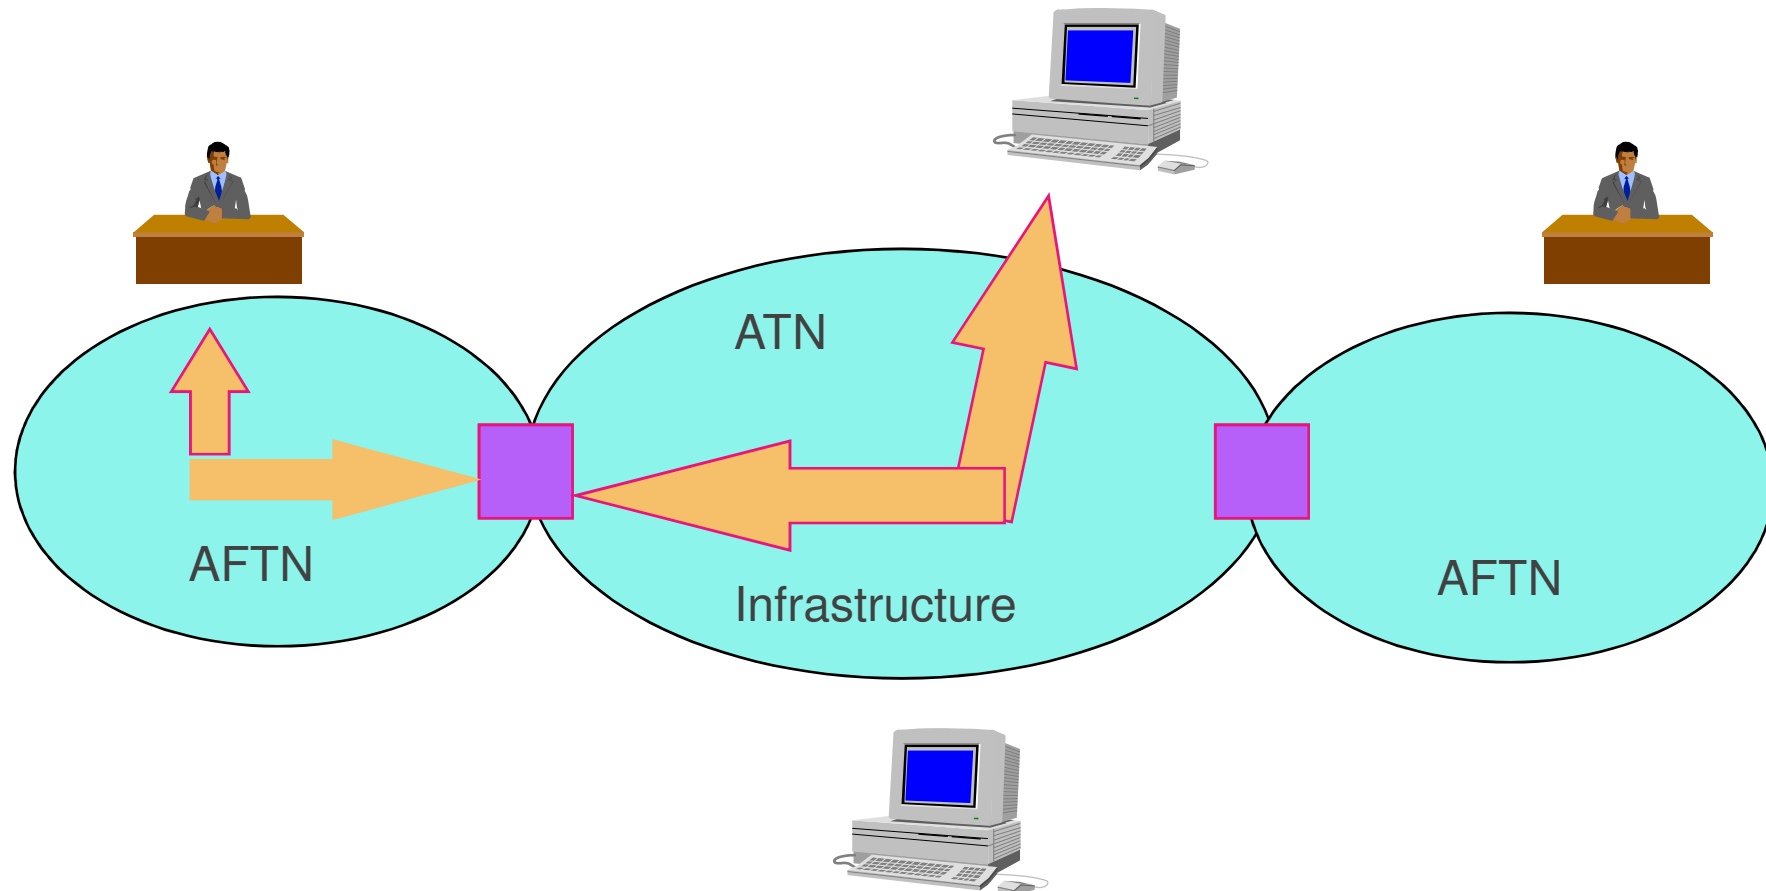

AMHS Summary

- ✈ Operational requirements
- ✈ MHS/X.400 Overview
- ✈ Definition of the ATS Message Service
- ✈ AMHS Components

AMHS Operational requirements (1/4)

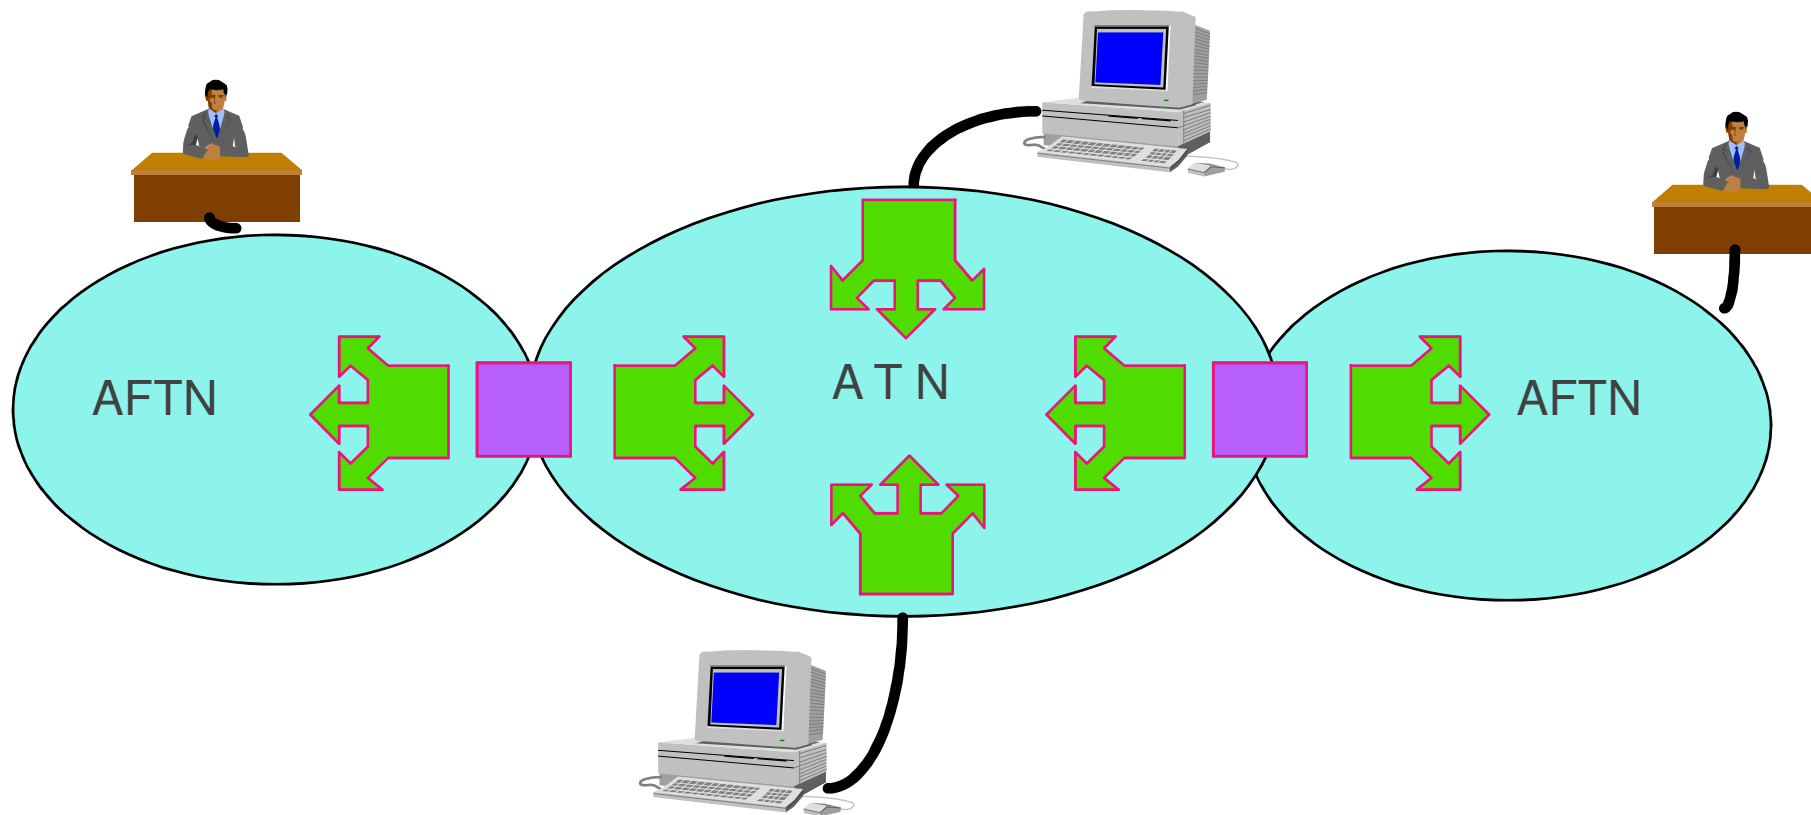

AMHS Operational requirements (2/4)

AMHS Operational requirements (3/4)

AMHS Operational requirements (4/4)

AMHS / ATS Message Service

MHS/X.400 Overview : The Standards (1/2)

- ✈ CCITT / ITU-T X.400 Series of Recommendation
Message Handling Systems
- ✈ ISO/IEC 10021 (9 parts) : Both texts are aligned in principle.
- ✈ The ATS Message Service (AMHS) fully complies with the ISO standards which are mature and widely implemented.

ATSMHS Users

- ✈ Direct AMHS users shall use either the basic ATSMHS or the extended ATSMHS at an ATS message user agent.
- ✈ Indirect AMHS users shall use only that part of the ATSMHS which corresponds to AFTN functionalities by using the interworking capability provided by an AFTN/AMHS gateway.
- ✈ X.400 includes some organisational restrictions
- ✈ ISO is the applicable AMHS standard

AMHS / ATS Message Service

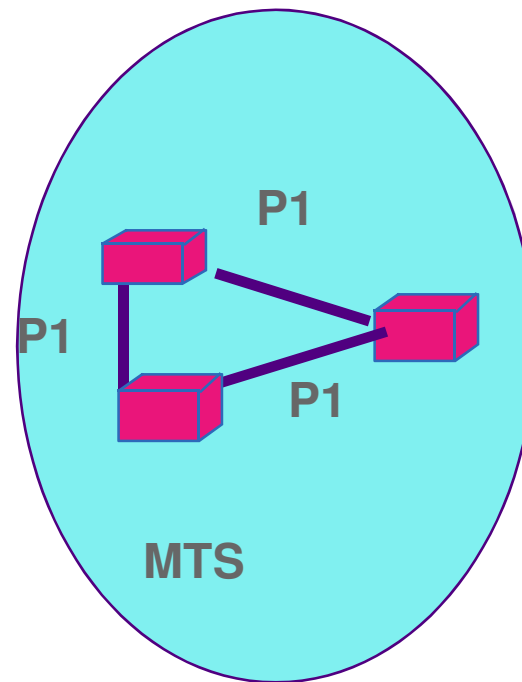

X.400 Overview : functional components

- **MTA** = Message Transfer Agent
 - Message Switch
- **UA** = User Agent
 - User Access to the MTA
 - Human Machine Interface is not standardised
- **MS** = Message Store
 - Intermediary storage between MTA and UA
 - Usually co-located with MTA
- **AU** = Access Unit
 - Conversion to other Messaging Systems

AMHS / ATS Message Service

X.400 Overview : Functional Components (MTA)

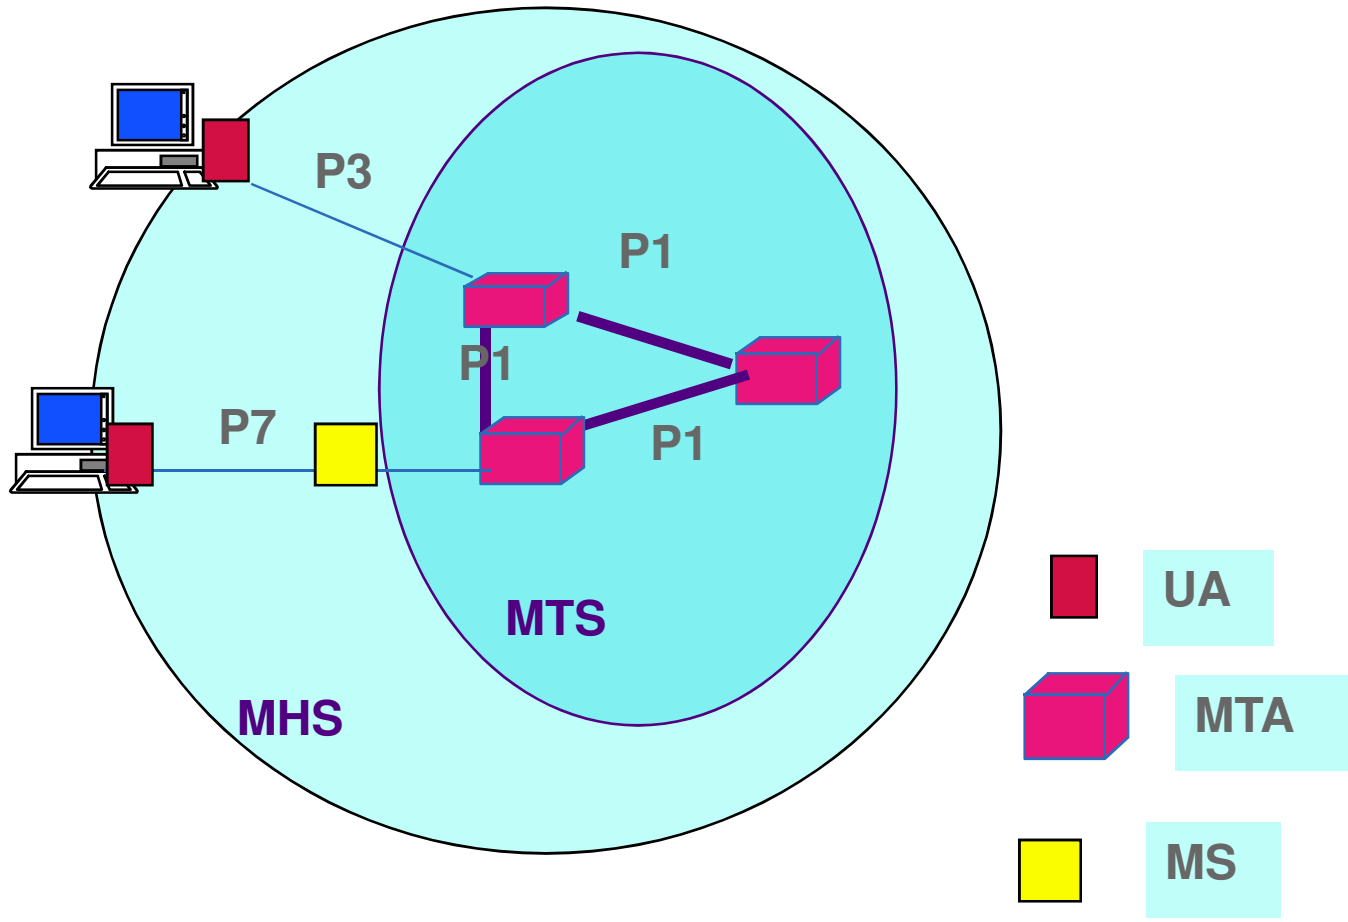

AMHS / ATS Message Service

X.400 Overview : Functional Components (UA)

AMHS / ATS Message Service

X.400 Overview : Functional Components (MS)

AMHS / ATS Message Service

X.400 Overview : Functional Components (AU)

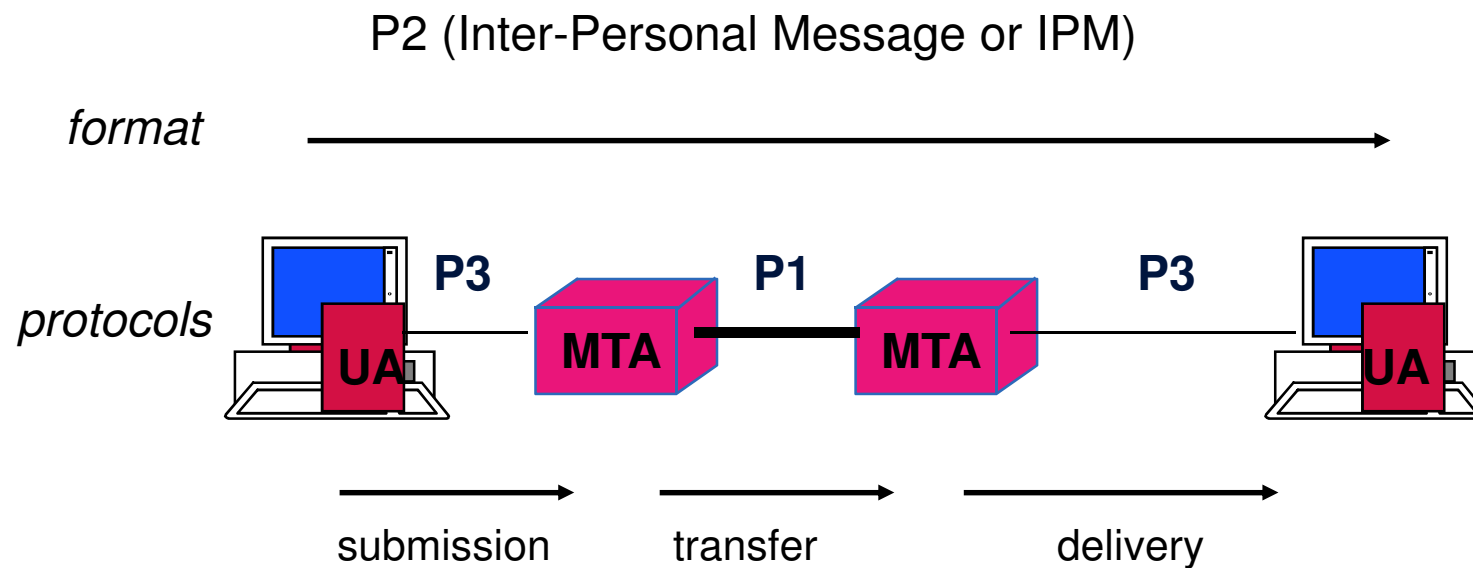

AMHS / ATS Message Service - X.400 Overview

Protocols, Formats and Operations (1/2)

Operation without message store

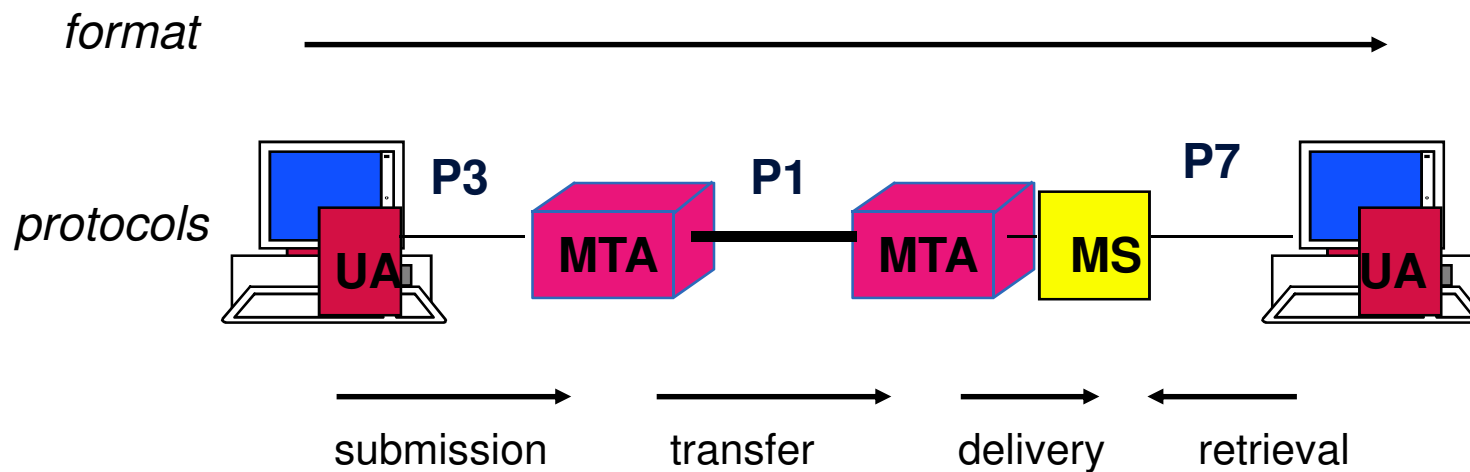

AMHS / ATS Message Service - X.400 Overview

Protocols, Formats and Operations (2/2)

Operation with message store

P2 (Inter-Personal Message or IPM)

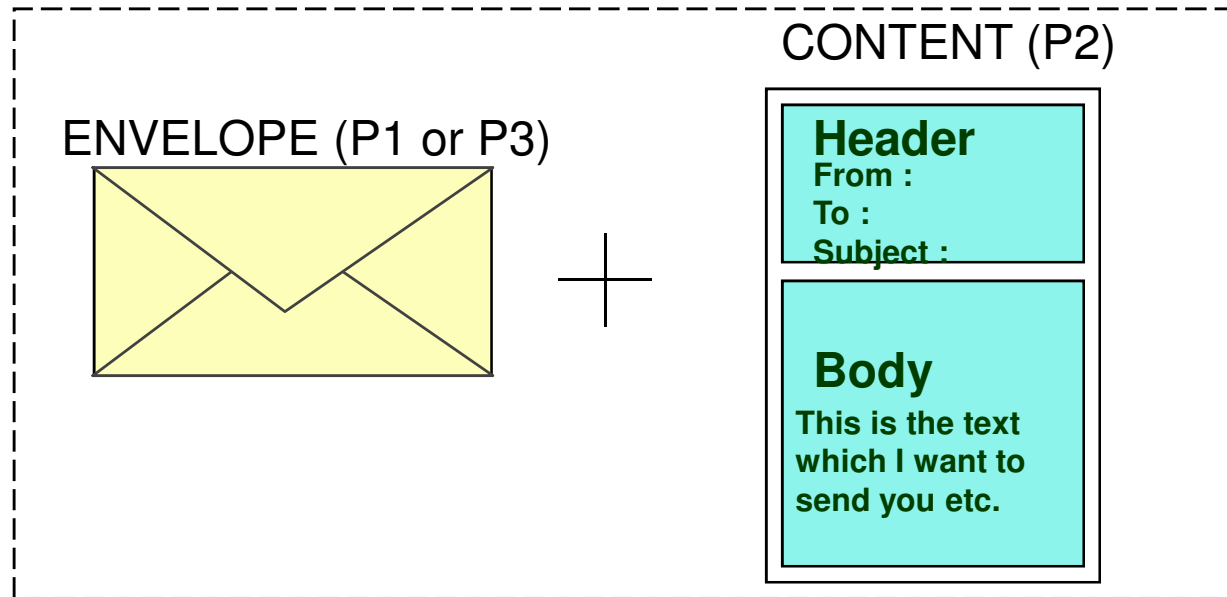

AMHS / ATS Message Service

X.400 Overview : Messages

MESSAGE

AMHS / ATS Message Service

X.400 Overview : Probes and Reports

- ✈ **Probe** = Message without Content (envelope only)

- ✈ **Report** = To inform the message originator about the outcome of a message conveyance:
 - Delivery Report (if delivery successful)
 - Non-Delivery Report (if transfer or delivery failed)

AMHS / ATS Message Service

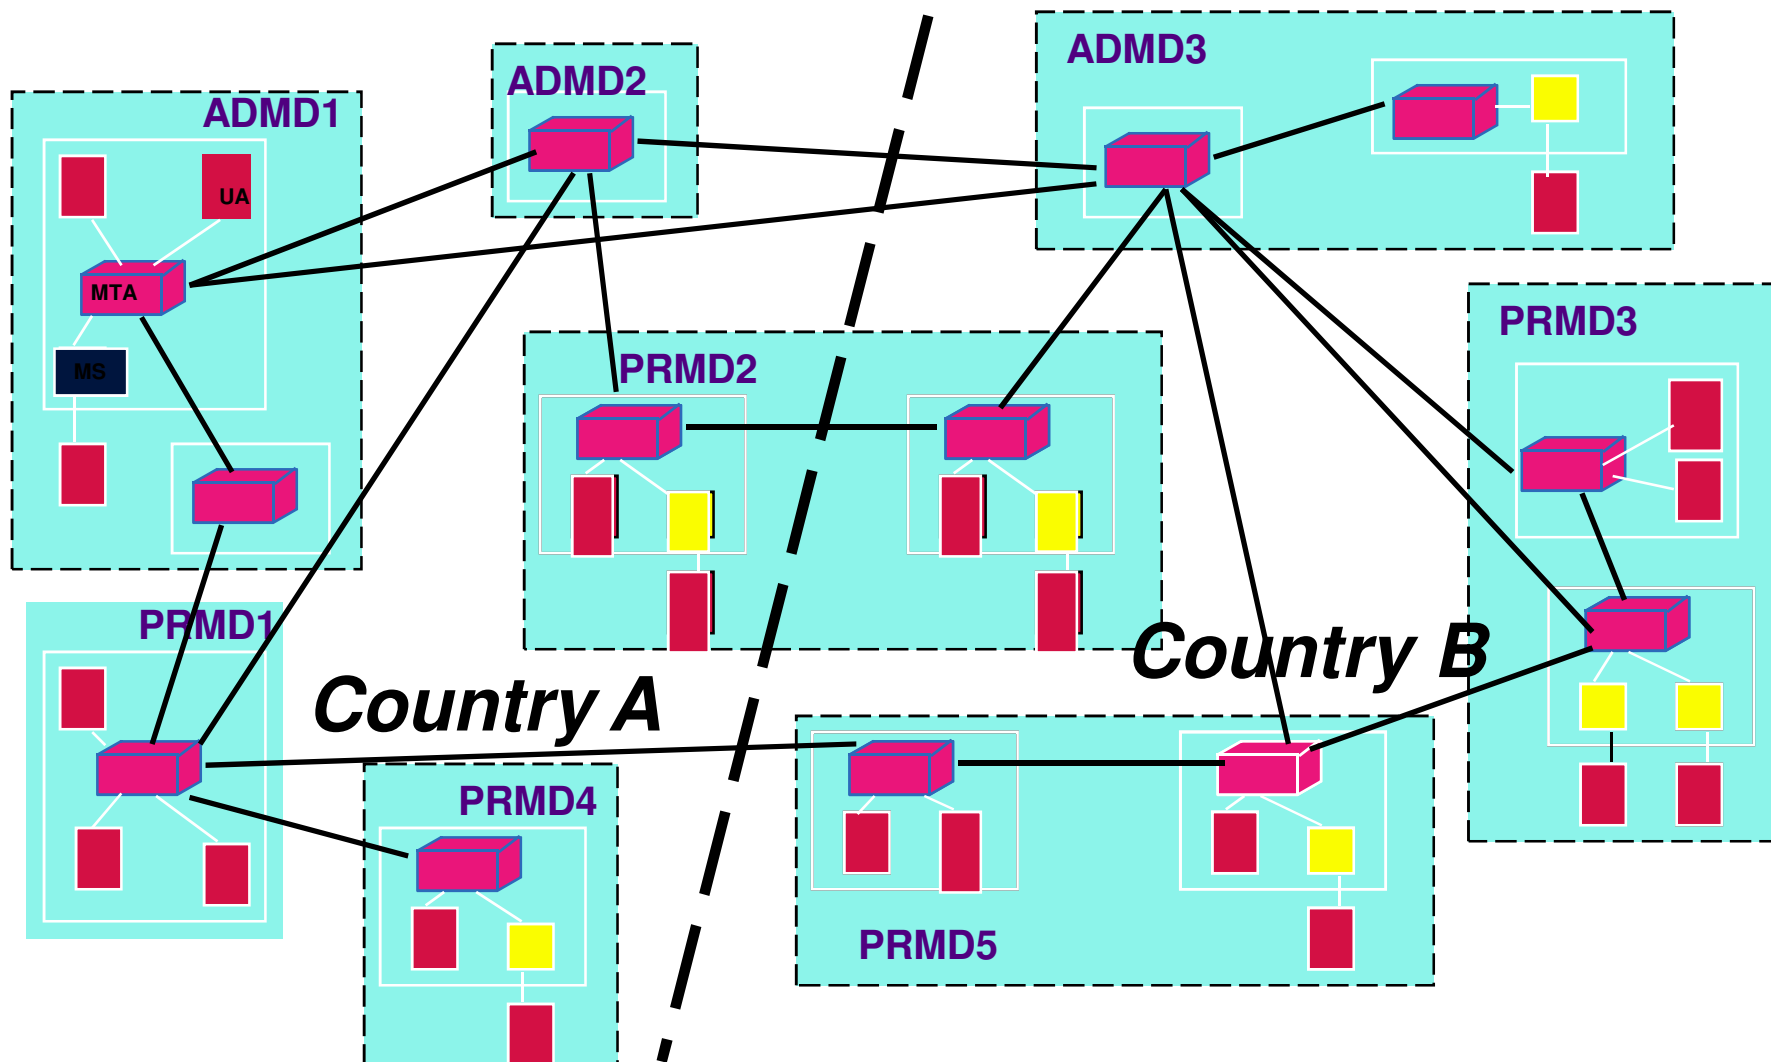

X.400 Overview : Management Domains

- Management Domain :
an organisational entity which manages at least one MTA (or several), and is responsible for the users connected to its MTA(s)
- a Management Domain can be :
 - ADMD (Administrative Management Domain), generally operated by a public telecom operator.
 - PRMD (Private Management Domain), generally operated by a private company or organisation.
- Usually an ADMD provides services to the public or a a community, while a PRMD serves only its own organisation.
- In accordance with ITU-T, ICAO is now the name an ADMD

AMHS / ATS Message Service - X.400 Overview

Examples of MD Interconnections

AMHS / ATS Message Service

X.400 Overview : Addressing

Each user (UA) in a Management Domain is identified with an **O/R Address** consisting of a set of **attributes**

- ✈ Four forms of O/R Addresses exist:
 - mnemonic (mostly used)
 - numeric
 - postal
 - terminal
- ✈ The available standard attributes for mnemonic O/R addresses are :
 - organisation-name (O)
 - organisational-units-name (4 values) (OU1 to OU4)
 - personal-name (surname, given-name, initial) (S, G, I)
 - common-name (CN)

AMHS / ATS Message Service X.400 Overview : Addressing

C=XX / A=ICAO / P=KENYA / O=ATNS / OU1 =COM Division / S=Kirkman / G=Lindi-Lee

- ✈ The Management Domain is globally identified by 2 or 3 standard attributes:
- Country-name (C)
 - ADMD-name (A)
 - PRMD-name (P)

AMHS / ATS Message Service

AFTN / X.400 : functional equivalence

AFTN

X400

AFTN Centre

MTA

AFTN Station

UA

Addressee Indicator

O/R Address

AMHS / ATS Message Service

Support of the ATS Message Service

✈ The provider of the ATS Message Service is called **ATS Message Handling System (AMHS)**

AFTN	MHS/X.400	AMHS
AFTN Centre	MTA	ATS Message Server (also includes optional MS)
AFTN Station	UA	ATS Message User Agent
	AU (+MTA)	AFTN / AMHS Gateway

AMHS / ATS Message Service

ATS Message Handling System (AMHS)

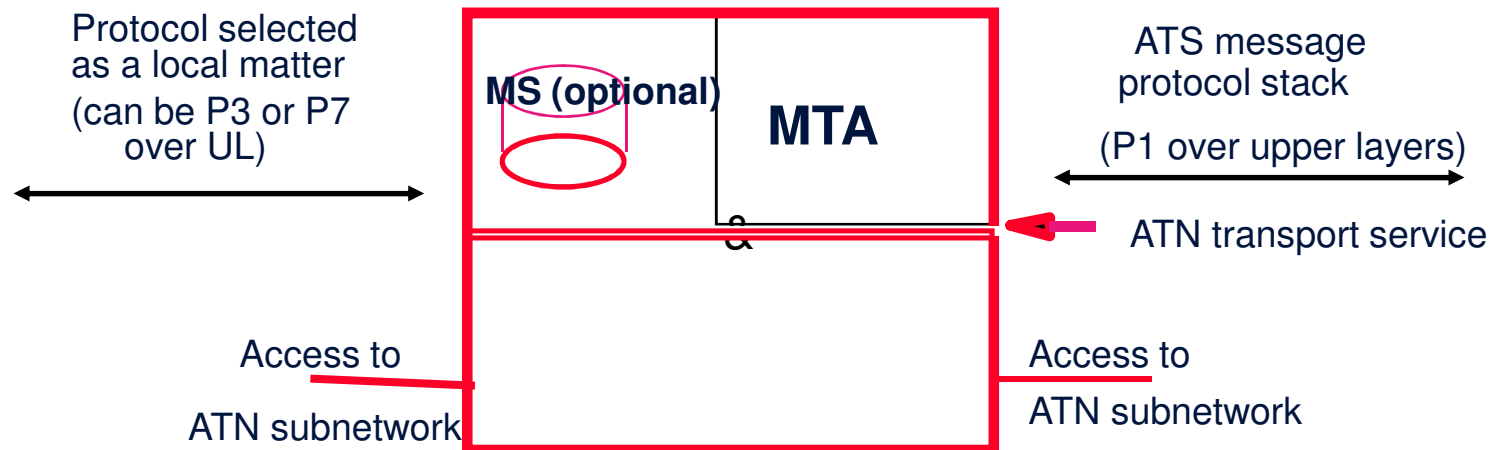

AMHS / ATS Message Service

ATS Message Server

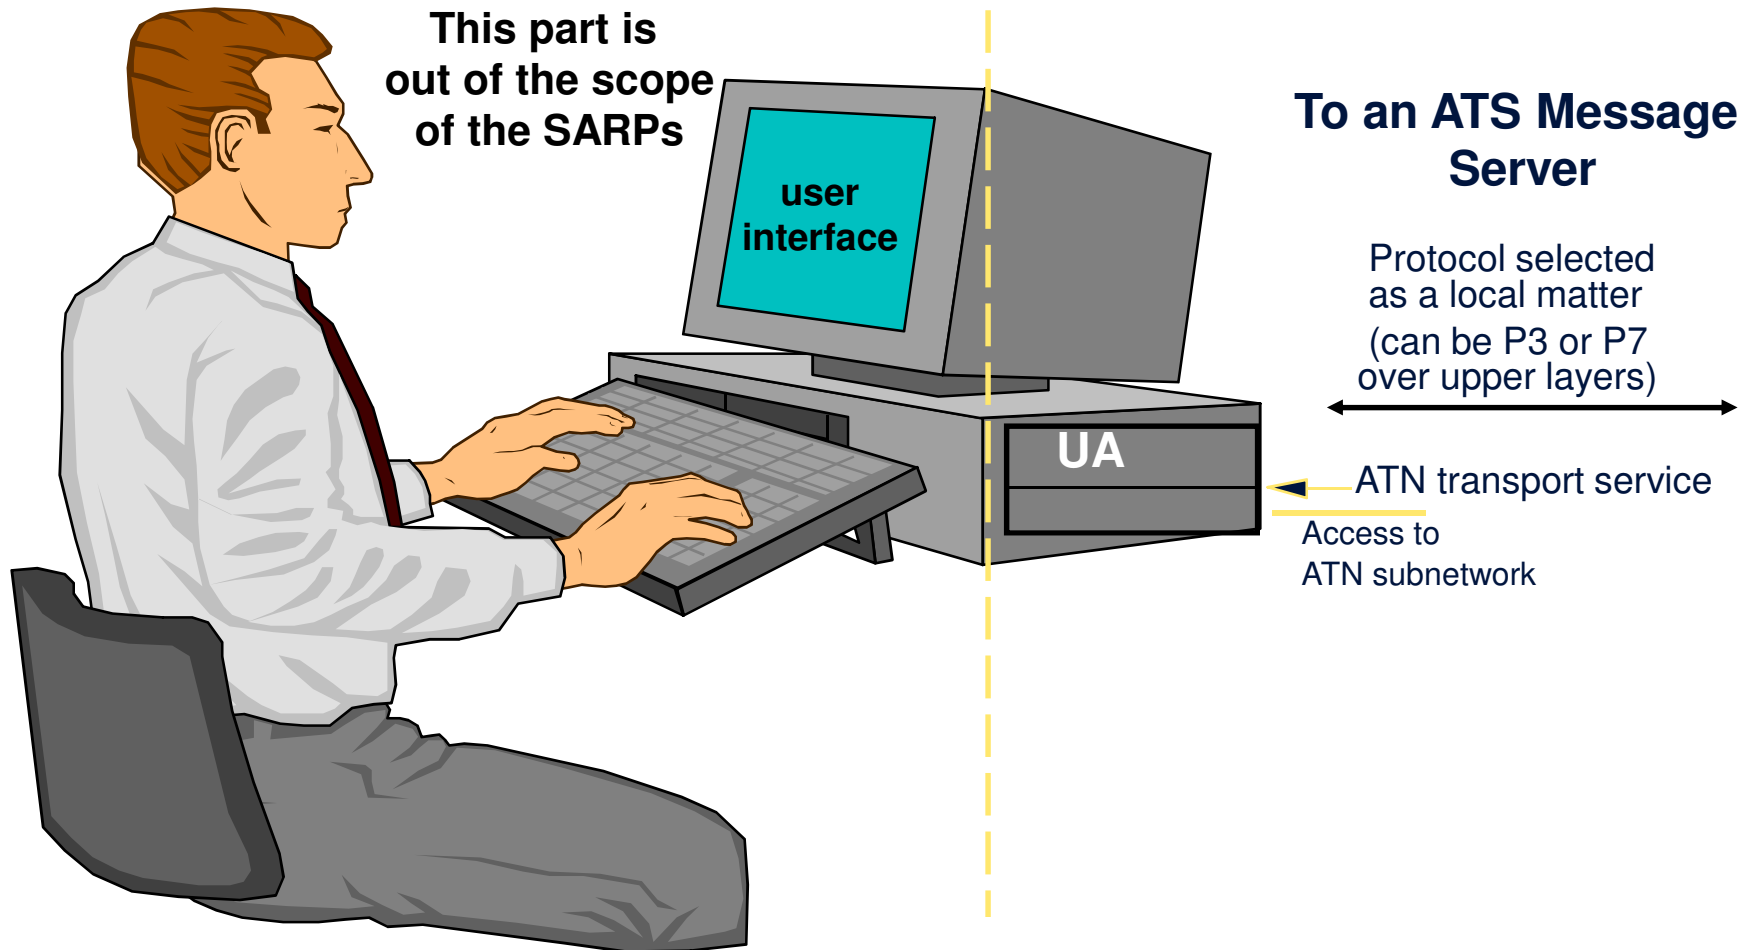

to ATS Message User Agents

To other ATS Message Servers
or AFTN/AMHS Gateways

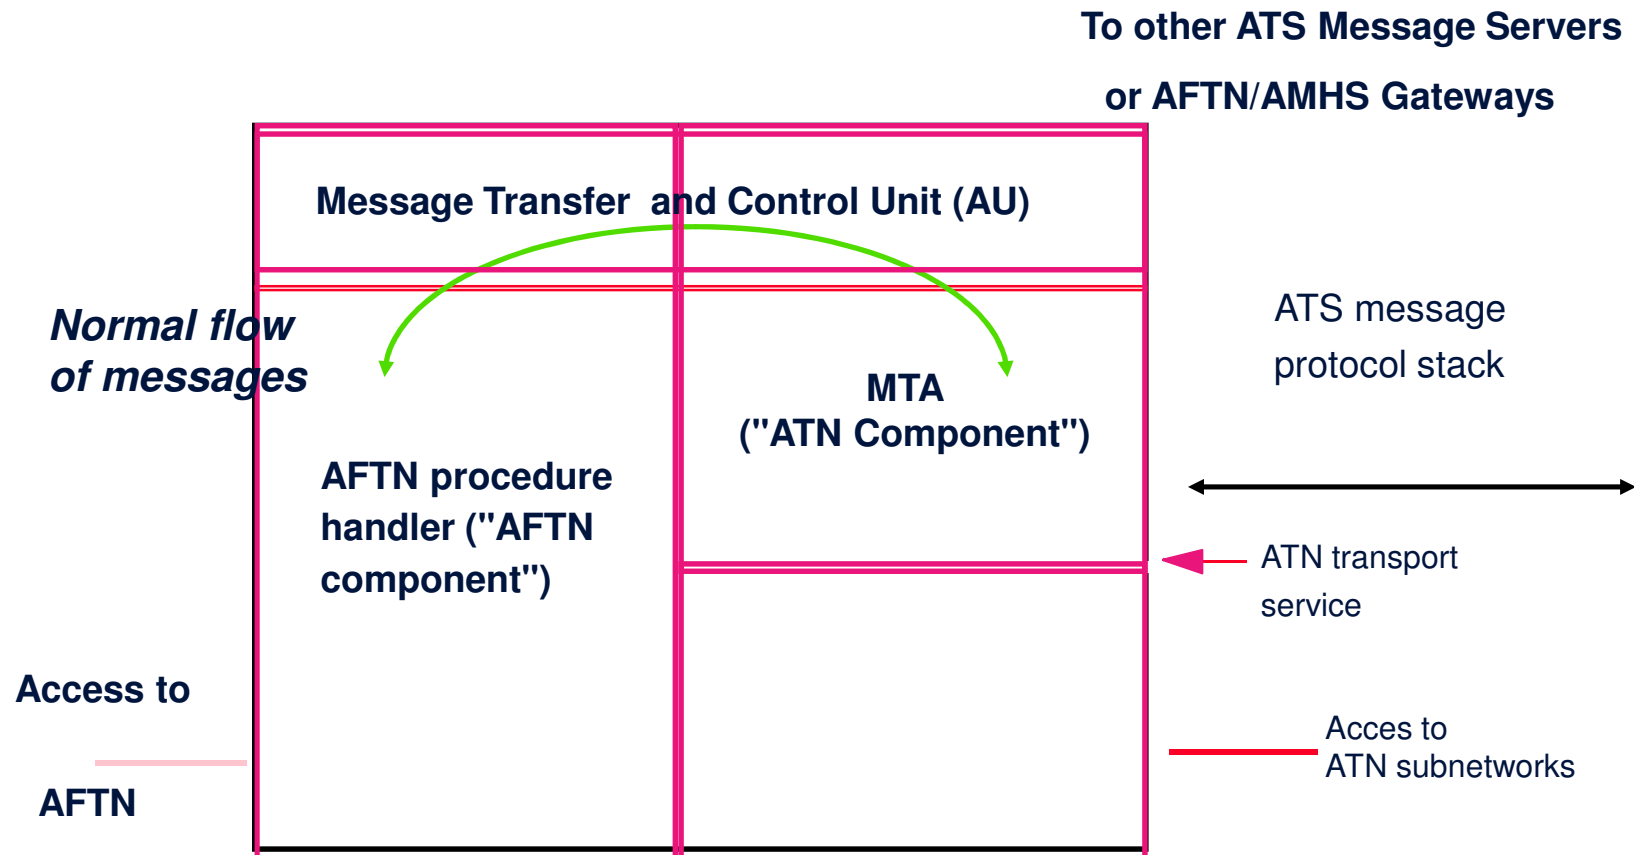

AMHS / ATS Message Service

ATS Message User Agent

AMHS / ATS Message Service

AFTN/AMHS Gateway (General Design)

AMHS / ATS Message Service

AFTN/AMHS Gateway (General Functionalities)

- ➔ Management of AFTN procedure
- ➔ AFTN ITA-2 to/from IA-5 conversion if needed traffic logging
- ➔ Conversion of AFTN messages (and of certain service messages) to/from AMHS messages and reports
- ➔ Rejection of AMHS messages which cannot be conveyed over the AFTN
- ➔ Address mapping : conversion of AFTN addressee indicators to/from O/R addresses
- ➔ Full MHS/X.400 support by ATN Component

AMHS / ATS Message Service

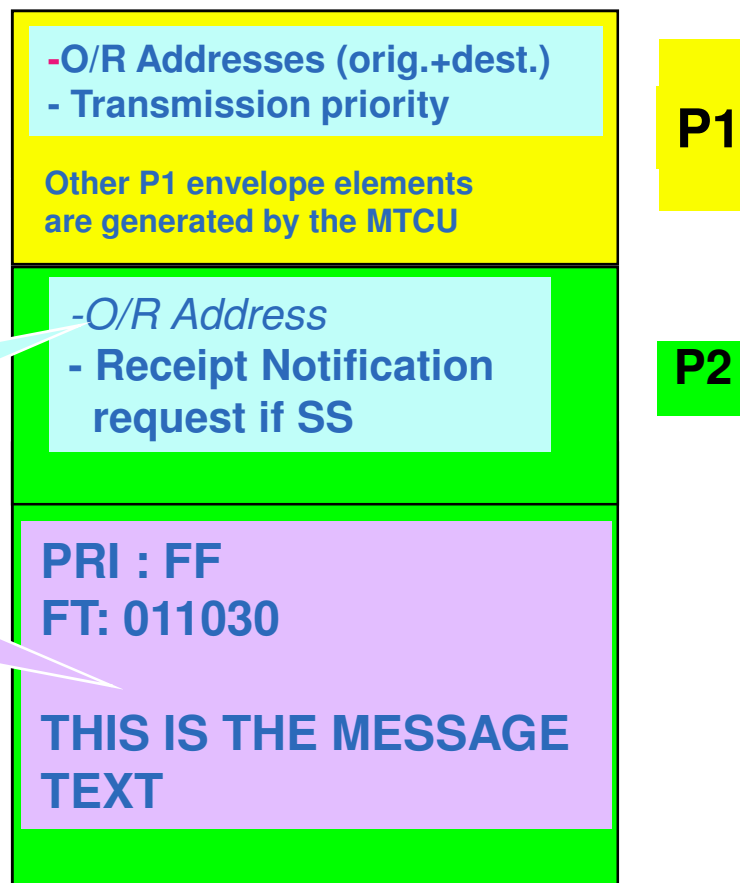

AFTN/AMHS Gateway (Conversion of Messages)

MESSAGE COMING FROM AFTN

ZCZC BAC002
 FF LFPOYIYA
 011030 LFPSYHYX
 THIS IS THE MESSAGE
 TEXT
 NNNN

MESSAGE CONVERTED IN THE AMHS

AMHS - AFTN/AMHS Gateway (Address Mapping)

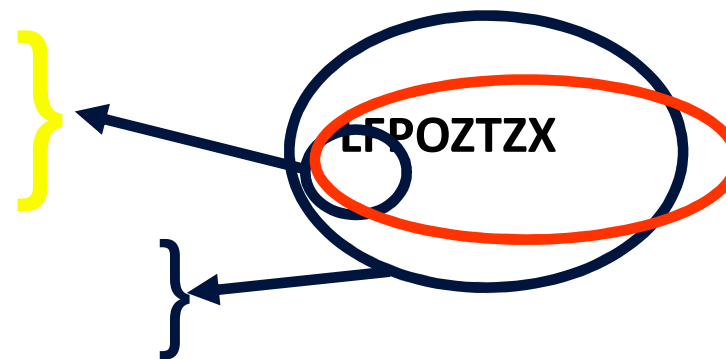

→ Use of XF-Addresses (defined in the SARPs)

- C=XX
- A=ICAO
- P=France
- O=AFTN
- OU1=LFPOZTZX
-

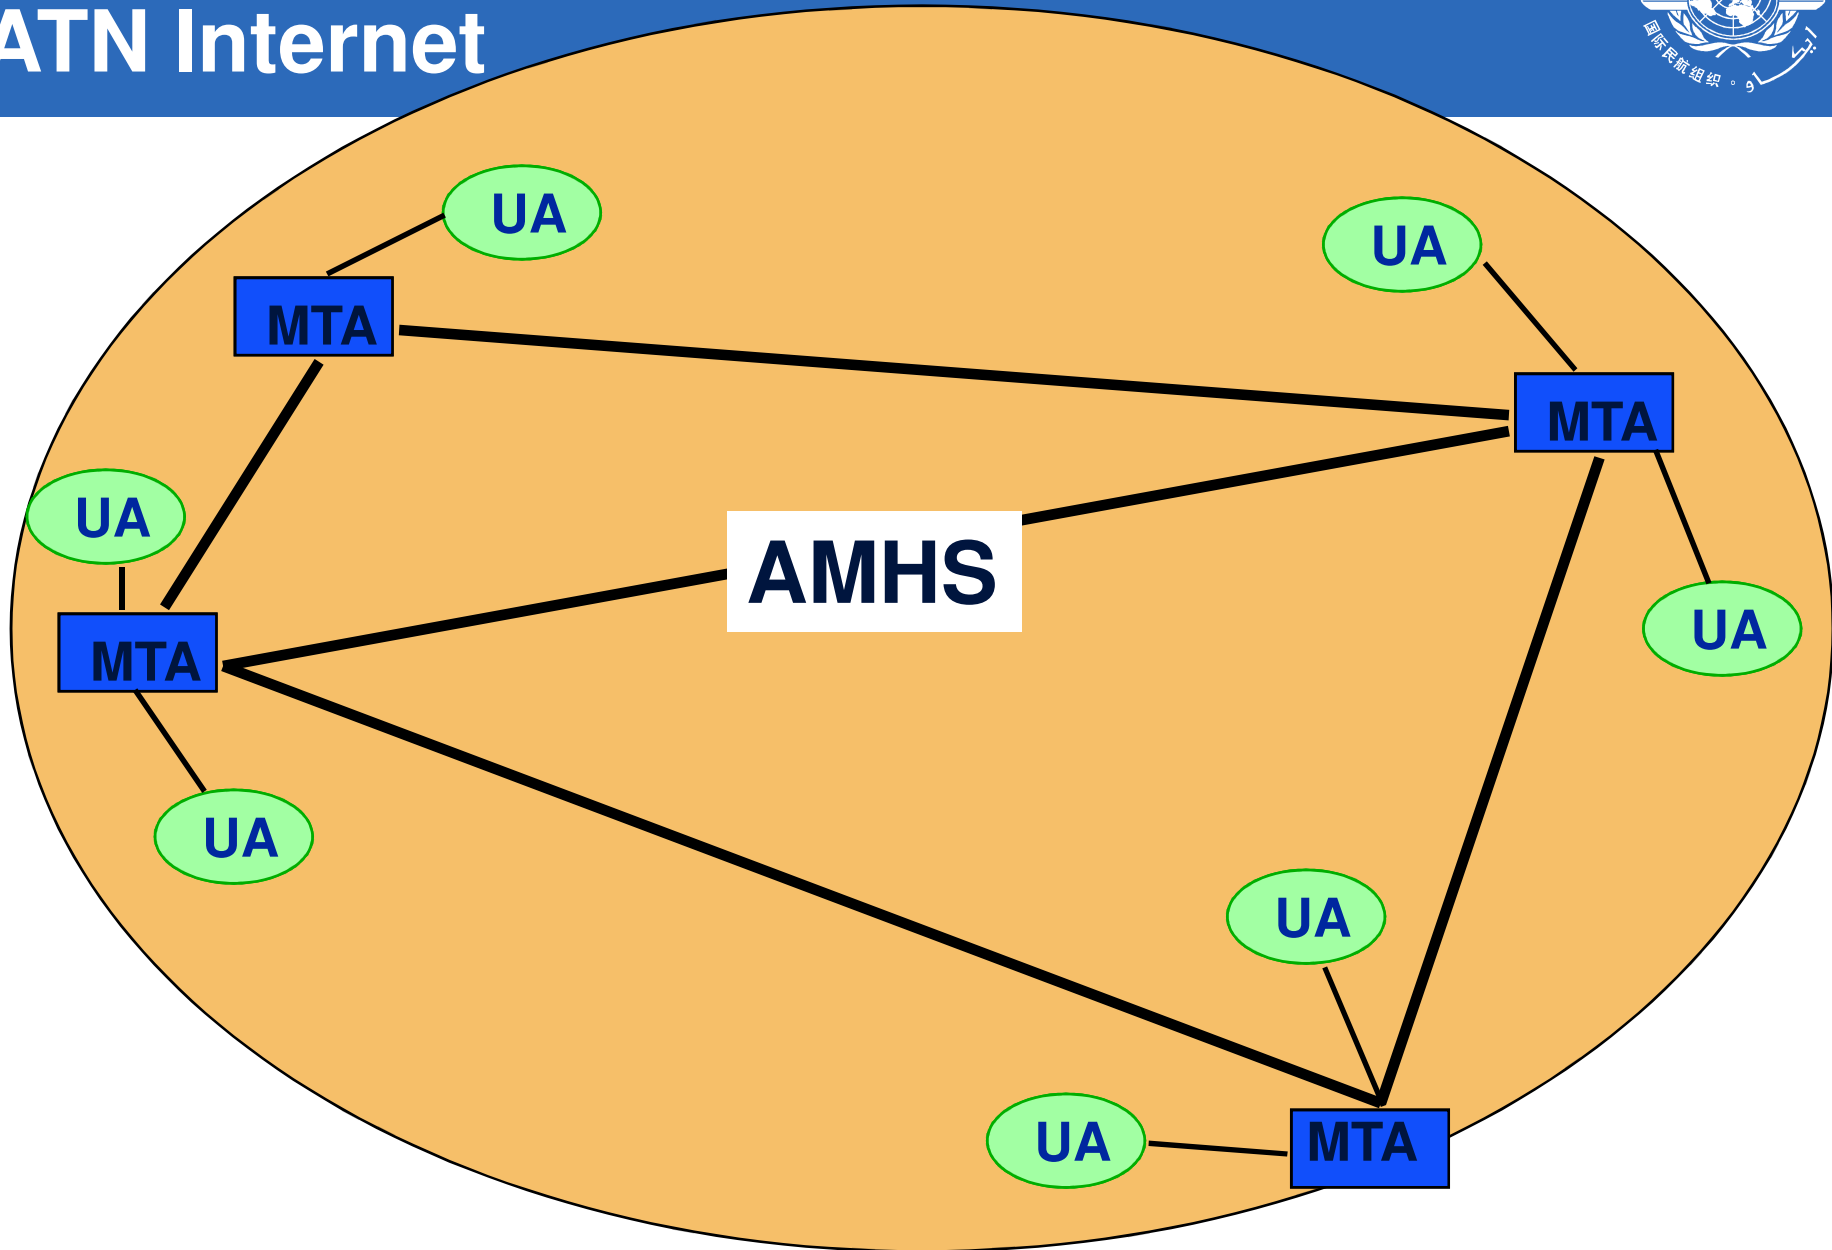

Use of MF-Addresses (without further SARPs specification: local matter)

- C=XX
- A= ICAO
- P=France
- O=LFFF
- OU1 = LFPO
- CN= LFPOZTZX

- Two types of addressing plans (common or local)
- Two ways of mapping addresses

ATS Message Service - Position of AMHS vs ATN Internet

Conclusion on AMHS (1/2)

- ✈️ **A store-and-forward messaging system over the ATN Internet or over existing industrial solutions**
- ✈️ **The system fully complies with mature standards**
- ✈️ **Widely available using off-the-shelf products**
- ✈️ **Full interoperability with AFTN via the AFTN/AMHS Gateway**

Conclusion on AMHS (2/2)

- ✈ **Significant improvements with the Basic ATS Message Service:**
 - no limit on message length
 - no limit on number of recipients per message
 - non-delivery reports
 - subject indication
 - very large extension capability
(redirection, security) with functional groups (FGs) => *Extended ATS Message Service*
